

3-6 Newsletter

Up, up and away

This term saw the temperatures dropping as we headed deeper into autumn and began to prepare for the cold, wintertime ahead. With the long, dark nights upon us, we decided to look up to the stars for our inspiration this term.

We looked at the phases of the moon, how our position around the sun gives us our seasons, and how long a year is on each different planet as well as each planet individually. Which one is the hottest? The coldest? The biggest? The smallest? All these questions we looked at together as well as continuing our daily life in our Montessori 3-6 ambiance.

Planets

Once we got to talking about the universe and our solar system, we were delighted to find out just how much the children already knew about this extraordinary place outside of our world; they are totally fascinated by it! As the weeks went by, we discussed each planet, the sun, the moon and how they all differ and have their unique place in our solar system.

Stars & science

The constellations were our inspiration for Friday afternoon art this term, and with all the different elements and amazing phenomena out there, we took a look at some classroom science experiments to get a little closer to the wonders surrounding us.

In the ambiance

With the cold weather outside, the children have been getting busy inside, perfecting their skills using the abundance of Montessori material available to them in our ambiance.

Sport

Christmas

The children were very busy in the weeks leading up to our Christmas show, rolling their sleeves up and getting their hands dirty making delicious seasonal treats.

Once the celebrations were over, they got to work creating their own Christmas gifts and greeting cards.

From all of us in the 3-6 team, we wish you a wonderful festive period. We look forward to seeing you again in the new year!
