The Christmas Show

The children were delighted to welcome you to listen to them sing their Christmas carols, and to share in the desserts and drinks which they had put together.

Road safety

The children were made aware of and practised road safety rules using several road signs. They put themselves in the role of both pedestrians and drivers.

Pancake Breakfast

Both the children and the educational team were happy to welcome you to share our delicious pancakes. Thank you to everyone who was able to be there and share the moment with us.

Raclette Tasting

A wonderful moment was had whilst sharing this rich, winter dish : raclette, which the children devoured with enthusiasm !

Introduction to Sailing

What an experience!

During November, in a Natura 2000 classified site in the Bay of Antibes, the children were able to take their first steps to learning about sailing in an exceptional location.

Here they learned to understand a new environment : the aquatic environment and the various changes of the weather.

A new machine, the Optimist, was presented to them and they were able to discover all the technicalities of this vehicle : the names of the different parts making it up and how to steer it while respecting safety instructions.

Day after day, the children were able to evolve and appreciate the world seen from the sea. As a crew of two, they surpassed themselves and experienced the thrill of speed.

All together, they shared the pleasure provided by this outdoor activity where we learned listening, humility, perseverance, surpassing oneself and where solidarity takes its place.

BASKET BALL SESSION

Basketball involves complex movements such as running, jumping, dribbling and shooting, which helps develop motor coordination.

This sport involves understanding game strategies, tactical patterns and quick decision-making, thereby contributing to the cognitive development of the children.

Discovering the Ocean

At the Oceanographic Museum of Monaco

All the students from the school went to the Oceanographic Museum of Monaco. On board a coach, the children were able to enjoy the view of a magnificent Mediterranean Sea sparkling in the sun. Arriving at the foot of this magnificent building, the museum opened its doors to us. In its depths, the children discovered an array of aquariums of the Mediterranean and tropical seas, as well as the Sea Turtle Odyssey zone.

The Food Chains

A workshop was presented to them in small groups, concerning marine food chains. Using images of living marine organisms, they were able to establish together the complex food chains between species within an ecosystem through which energy and matter circulate.

After a picnic in the sun on the roof terrace, the children travelled in immersion from the North Pole to the South Pole. In the Immersion room, the wild and immense beauty of these icy lands came to life in a unique immersive and interactive device. On 650 m² of projection surface, 6 emblematic scenes of polar landscapes were broadcast. This virtual enchantment presented the fragile and tumultuous life of polar animals and ended with the incredible spectacle of the Northern Lights.

CHRISTMAS ART

The Christmas period is given to creativity. The children created fabulous winter landscapes accompanied by a Christmas card.

At the end of the puzzles solved throughout the Advent calendar on the theme of marine animals, the children opened their gift.
